#### SECTOR UPDATE

### **Banking – Singapore**

Flexible Adaption In Response To Disapproval From Treasury Markets

The Trump Administration made two consecutive concessions: a) a 90-day pause for countries with reciprocal tariffs above the baseline rate of 10%, and b) exemption for electronics products imported from China. Trump has shown himself to be pragmatic enough to accommodate the concerns of businesses and consumers. Upgrade to MARKET WEIGHT. HOLD DBS (Target: S\$40.00). Upgrade OCBC to BUY (Target: S\$16.90). DBS and OCBC provide attractive 2025 yields of 7.9% and 6.7% respectively.

#### WHAT'S NEW

- Dialling back on assertiveness with 90-day pause. The Trump Administration has authorised a 90-day pause for 60 trading partners and the European Union (EU) hit by higher reciprocal tariffs above the baseline rate of 10%. These countries are now subject to a flat reciprocal tariff of 10%. The US has started negotiations to cut deals with more than 70 countries. Countries could offer to lower their own tariff and remove other barriers to trade, such as simplifying regulations, removing import quotas and reducing subsidies to domestic producers. According to Chairman of National Economic Council Kevin Hassett, 15 countries have made offers to the US. Priority would be given to closing deals with allies, such as Japan and Israel.
- Imports of electronics products from China exempted from reciprocal tariffs. The Trump Administration has exempted 20 categories of electronics products imported from China from reciprocal tariff of 125%. They include semiconductors, memory chips, smartphones, laptops, tablets, computer monitors and flat panel displays. The initial 20% tariff imposed on all imports from China related to Fentanyl trafficking remains in place. The exemption is a major reversal as these electronics products are the largest categories of imports, accounting for 23% of total imports from China.
- Heeding admonitions from treasury markets. The Trump Administration's protectionist tendencies suggest that the US might play a less central role in global trade, making the US Dollar less important for invoicing imports and exports. Thus, the US Dollar's role as a safe haven and reserve currency has diminished. On the other hand, alternative safe havens and reserve currencies, such as the Euro and Japanese Yen, have gained traction. Long dated 10-year, 20-year and 30-year US government bond yields have rose by 50bp, 50bp and 47bp respectively last week to 4.49%, 4.93%, and 4.87%. The higher government bond yield reflected foreign investors' disappointment over uncertainties surrounding the Trump Administration's flip-flopping trade policy.
- Consumers starting to feel the pain. Retailers, such as Target and Best Buy, have warned that price increases and product shortages could materialise as early as April. Prices of perishable goods are likely the first to be increased. Many retailers have stockpiled additional inventory since late-24. They could start to raise prices later in August/September, which coincide to back-to-school shopping. Eventually, retailers have to pass on some of higher costs to consumers. University of Michigan's one-year inflation expectation has soared to multi-decades high of 6.7% in Apr 25.
- Interest rates likely to be on hold. John Williams, President of NY Fed, forecast inflation would rise to 3.5-4.0% in 2025 due to tariffs imposed by the Trump Administration. He expects GDP growth to slow considerably to below 1.0%, while unemployment would reach 4.5-5.0%. He views the current modestly restrictive stance of monetary policy to be appropriate. A few other Fed officials, such as Neel Kashkari and Alberto Musalem, have also signalled intention to keep rates on hold. The Fed will closely monitor that inflationary pressure does not become entrenched and persistent.

### Regional Morning Notes

• The Fed stands ready to intervene. Susan Collins, President of Boston Fed, assured that the Fed is prepared to deploy various tools to stabilise financial markets should trading become disorderly or liquidity dries up.

#### ACTION

- Upgrade to MARKET WEIGHT. The Trump Administration has made two major consecutive concessions last Thursday and Friday, reflecting pragmatic accommodation to concerns raised by leaders in the business communities. The moderation of intensity of trade conflict and toning down of aggression would facilitate negotiations with trading partners. The risk of triggering persistent inflation has also eased slightly.
- Singapore remains vulnerable. Singapore would be affected by a slowdown in trade globally and regionally. According to UOB GEMR, final demand from the US accounted for 8.3% of domestic value-add in Singapore, which is high relative to other ASEAN countries. Singapore would not be imposing retaliatory tariffs against the US. Deputy PM Gan Kim Yong assured Singaporeans that the government is prepared to provide more support for households and businesses if the situation deteriorates.

SECTOR CATALYSTS

- Slowdown in trade globally and regionally, leading to a decline in loan growth.
- Slowdown and job losses in the manufacturing sector within ASEAN countries, which are likely to spill over into a contraction in domestic consumption. Asset quality could start to deteriorate.

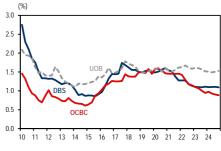

#### **RISKS**

• Escalation of trade conflicts between the US, EU and China.

• Geopolitical tensions between the US, EU and China.
